

Automatic Drain Valve Model X51

PRODUCT DESCRIPTION AND OPERATION

Your Wilkerson Model X51 automatically drains liquid water and oil from compressed air receivers and systems. This drain valve automatically opens and shuts (fires) every time the system pressure decays approximately 10 psig (0,7 bar) during the compressor cycle. It is recommended that the compressor cycle is set greater than 20 psig (1,4 bar) to insure firing of the valve.

SPECIFICATIONS

Pressure Range	30-200 psig (2,0-13,5 bar)
Min. & Max. Operating Temp.	35°F-150°F (2-79°C)
Minimum Differential Pressure Required.....	10 psig (0,7 bar)
Weight	0.8 lbs (0,35 kg)
Height	3.75 inches (95 mm)
Inlet/Outlet Ports.....	1/4 NPT (F)
Screen Adapter	3/8 NPT (M) inlet, 1/4 NPT (M) outlet

REPAIR KITS AND REPLACEMENT PARTS

Maintenance Kit	XRP-95-511
Piston.....	XRP-95-512
Inlet Screen	XRP-95-999
